Vivek Mishra has uploaded review for Early Anomaly Detection in Second-Life Battery Modules via Contextual-Temporal Local Outlier Factor (CT-LOF)

-- Review Summary --

1. Overall Evaluation:

Please provide a detailed review including a justification for your scores. Both the score and the review are required.

Accept

2. Comments for the author:

The paper is clearly written, addresses a relevant problem in SLB monitoring, and presents a coherent CT-LOF pipeline with convincing improvements in delay, false activations, and PR-AUC over the LOF-V baseline. To strengthen it further, I suggest: clarifying deployment assumptions for real BMS integration (sampling, N , calibration frequency), adding a brief hyperparameter sensitivity discussion (k , w , r , α), better justifying the realism of the injected "controlled deviation" ground truth (ideally with one qualitative example of signals and alarms), briefly motivating the choice of baselines and why simpler contextual thresholds are not included, and adding a short note on how operators can interpret high LOF scores in terms of feature contributions.
