RE: Mr. Vivek Mishra's application for an EB-1A visa

To the USCIS Officer,

My name is Sumit Bhatnagar, and I serve as a Vice President in the Technology Division at JPMorgan Chase & Co. In addition to my role leading cloud platform engineering teams at one of the world's largest financial institutions, I am a Senior Member of the IEEE, a Fellow of the IETE, and a member of the Forbes Technology Council. Throughout my career, I have served as a judge for major industry awards and peer-reviewed over 100 research papers. I mention these credentials to assure you that my assessment of Mr. Vivek Mishra is based on a rigorous standard of technical excellence.

I have known Vivek since April 2024. While he did not report directly to me, his work on the Chase Shopping Hub has been a focal point for our division. As a Vice President observing the broader technology landscape within the bank, I have independently evaluated his performance. In an organization as large as JPMorgan Chase, it is rare for an individual engineer's contributions to influence other teams, yet that is exactly what Vivek has achieved. His work has been central to our ability to serve our digital customers reliably.

The Chase Shopping Hub is a major initiative designed to unify promotional offers for more than 80 million customers across our web and mobile platforms. When Vivek joined the project, the existing system faced significant challenges regarding scalability and cost efficiency. Vivek stepped into a high-pressure environment and took full ownership of the backend architecture. He operated with a level of autonomy typically reserved for senior technical leads, having full authority to make critical design decisions including system layout and resource allocation.

What makes Vivek's role so critical is the operational responsibility he carries. In this capacity, he had to make real-time decisions on cost controls and capacity planning. A misstep here could have resulted in significant financial waste or service outages for millions of users. Instead, Vivek demonstrated exceptional judgment and technical skill. He

introduced cost-control solutions for AWS that resulted in savings of around \$100,000. This level of financial stewardship combined with deep technical expertise for AWS resources is difficult to find and makes him a major asset to any organization.

From a performance perspective, Vivek's work transformed the user experience for our customers. The prior system suffered from slow responses, but Vivek implemented improvements that were remarkably effective. I reviewed the performance metrics myself, and his changes cut response times from 53 milliseconds down to 30 milliseconds—a 43% improvement. While this may seem like a matter of milliseconds, at our scale, this speed increase directly improved customer satisfaction by 15%. Furthermore, his redesign of our deployment processes reduced release cycles from days to mere hours, allowing the business to react to market changes almost instantly.

Beyond his direct contributions, Vivek provided technical governance for senior engineers. He established the standards for code quality and security that protected our systems. His influence extended even to senior leadership. I personally benefited from his expertise on cloud cost governance, and I have since applied the approaches he developed across my own teams. The successful launch of the platform saw zero downtime, a remarkable achievement given the scale and complexity involved.

What truly distinguishes Vivek is his ability to be a critical resource wherever he works. At JPMorgan Chase, he quickly became indispensable to the success of a platform serving 80 million customers. His unique combination of technical expertise, business judgment, and leadership capability makes him the type of professional that organizations depend upon for their most important initiatives. Given the current demands on the U.S. financial technology sector to modernize infrastructure while maintaining strict security and cost efficiency, professionals with Vivek's profile are essential and rare.

Vivek has proven his ability to solve complex, large-scale problems that directly impact the bottom line of a major American financial institution. His expertise in high-volume system architecture and his demonstrated track record of delivering measurable business results make him a critical asset not just for Chase, but for any organization fortunate enough to work with him.

It is without hesitation that I recommend Vivek for the EB-1A visa. He has established himself as a critical resource to JPMorgan Chase, and I am confident that he will continue to deliver significant benefits to the United States technology sector and any organization he works with in the future.

Sincerely,

A handwritten signature in black ink, appearing to read 'Sumit Bhatnagar', written in a cursive style.

Sumit Bhatnagar

Vice President, Engineering

JPMorgan Chase & Co.
